

- 1 Connect Elevate to the AGI 4 via the adapter cable and black connector on the back of the receiver

- 2 **Note:** Placement of the elevate modem on the cab roof is vitally important to performance. User must extend the entire length of the cable away from the receiver as shown below.

- 3 Navigate to the Wrench icon

- 4 Select System; then GPS; then Correction

- 5 Configure the GPS correction source page according to the screenshot

- 6 Return to the Run screen to confirm RTK
