John Deere "T" Cable Installation

1 Unplug the receiver cable from under the cab. Plug-in in T-cable to the male connector on cab and female end to receiver.

**2** Run the long end of the cable to the roof and plug into the modem in port A.

Note: Placement of the elevate modem on the cab roof is vitally important to performance. User must extend the entire length of the cable away from the receiver as shown below.

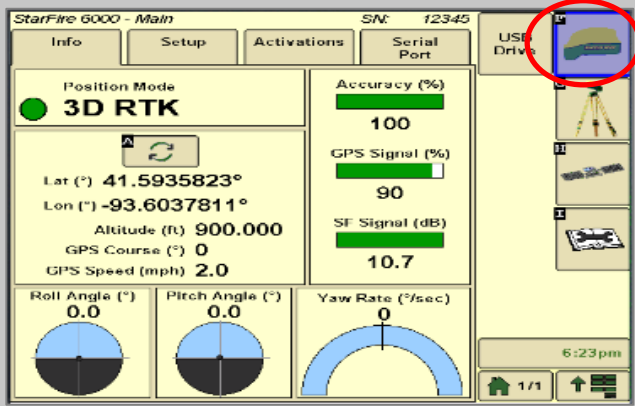

3 Use the included alcohol swabs to clean the mounting area. Peal back the sticker tabs and press the mounting plate firm on the cleaned cab roof.

**4** Place elevate slim on the installed mounting plate with the magnets facing down.

Continue installation on back page ➡
